

Scientists Keep Warning About The Dangers of 5G; Will We Listen?

[Over 180 scientists](#) and doctors in almost 40 countries are warning the world about 5G health risks. These scientists' response to "Resolution 1815 of the Council of Europe" spells it out quite succinctly:

"We, the undersigned scientists, recommend a moratorium on the roll-out of the fifth generation, 5G, until potential hazards for human health and the environment have been fully investigated by scientists independent from industry. 5G will substantially increase exposure to radio frequency electromagnetic fields (RF-EMF)... and has been proven to be harmful for humans and the environment."

If you're not alarmed about 5G radiation dangers, you should be...

With download speeds up to 20 to 30X faster than 4G, 5G promises a new world, including becoming the foundation for self-driving cars while also causing a long list of potential health risks. "5G Cancer" is actually a thing. The cities of Brussels and Geneva have even blocked trials and banned upgrades to 5G out of this concern.

The difference between 4G and 5G in terms of gigahertz, the unit of alternating current (AC) or electromagnetic (EM) waves that affect the transmission speeds of devices, is significant. 5G technology promises radio millimeter bands in the 30 to 300 GHz range, while 4G tops out at around 6GHz. When applied to video latency, this translates to speeds up to 60 to 120 times faster.

Before 2G, 3G, and 4G, radio frequencies were benign. We never worried whether or not our drive-time radio shows would fry our brains. Sadly, once the concept of wireless "G" technology was initiated, we began exposing the global public to frequencies akin to [microwaves at 1 billion cycles per second](#).

Humans, animals and the environment have all been at risk for years. While 4G was bad

enough, 5G takes the game to a whole new level of insanity.

5G (or 5th Generation) refers to the latest advancement in wireless systems. 5G promises to bring larger channels, higher speeds, larger packets of data, exponential responsiveness, and the ability to connect a host of devices from a single location. At the start, 5G networks won't all work the same. Some will be slow, and some of these networks will be super-fast, but with limited coverage. Eventually, they will form a global grid, unlike anything the Earth has seen.

While it would be fair to assume that 5G technology has been tested for risks, this is simply not the case. There is no compelling data on health risks. In fact, when 5G launches, it will be the first actual test on human beings ever performed. This is unprecedented for such a wide-scale, public tech launch.

While 4G's wavelengths travel along the surface of the skin, 5G's millimeter waves are more insidious. When 5G wavelengths are emitted, our [skin will automatically absorb them](#), which will naturally cause the skin to rise in temperature.

Already live in three countries, 5G is the first global electromagnetic radiation test on human beings in the history of Planet Earth. While most wireless industry executives kibosh the long list of legitimate 5G health concerns, most scientists believe that the public is in danger and that further tests are needed.

Does 5G Cause Cancer?

Many scientists understand that the electromagnetic radiation leaking through the doors of our microwave ovens are carcinogenic, and therefore, can cause cancer. Most of these scientists also believe that these waves are mutagenic, meaning they [change the DNA structure of living beings](#).

The launch of 5G will be similar to turning on your microwave, opening its door, and leaving it on for the rest of your life. There's good reason why hundreds of scientists are taking action against the wireless industry.

Are 5G Towers Dangerous?

For the past ten years, 5G technology has been in development. Originally planned as a layer atop 3G and 4G, 5G is fast becoming a world of its own.

Every cell tower in your neighborhood emits radio frequency (RF) radiation. [Radiation causes cancer](#). By 2021, every city will have 5G towers and cell stations. These devices will be on the top or side of millions of buildings throughout the world.

The wireless industry is not just building an infrastructure that provides faster downloads; it's building a global microwave oven.

Yes, 5G towers and mini-stations are extremely dangerous. Not only are the shorter millimeter waves more hazardous to human beings, because of the intensity of the technology, it will require millions more mini cell towers than before, potentially one tower per 2 to 8 houses. This means a human being's RF radiation exposure will not only increase, it

will exponentially increase within months.

These towers are not only dangerous; they're lethal – and should be considered a crime against humanity.

Health Risks of 5G Technology

While there is a lot of chatter against the anti-5G community, there are also a lot of compelling discussions between scientists who are waging war against the untested technology.

In general, radiation does one major thing to human beings and animals – it destroys our DNA, either by forcing the DNA to mutate or by killing specific groups of cells, [all of which lead to cancer](#).

Here's what to expect if you experience prolonged exposure to radiation:

1. Nausea
2. Swelling
3. Hair Loss
4. Decreased appetite
5. Low energy
6. Damaged bone marrow
7. Damaged organs
8. Deep depression
9. Confusion
10. Infections
11. Incapacitation and Death

How to Protect Yourself from 5G

Besides moving to Mars or the Moon, we are limited in ways to protect ourselves from this dangerous technology. Cell tower radiation health effects are real. Because there will be thousands of these towers and stations in every city, it will be almost impossible to avoid them. Given how addicted we are to our devices, the general public will tend toward risking life and limb to [support our screen-related addictions](#).

That said, there are some things we can do to protect ourselves from radiation. The more we focus on our health and diet, the more our immune systems can defend against the challenges related to 5G radiation.

Spirulina, Wheat Grass, Vitamin C, and similar supplements are consumable forms of sunlight, which will always improve our health and raise our vibrations. [Yoga, meditation, chanting](#), mantras and other forms of prayer can also be beneficial in protecting our life-energies.

While fear can weaken our electromagnetic fields, love, intimacy and social vulnerability can strengthen them. The most important thing we can do is to focus on improving our health,

states of mind and exposure to nature. We always have control of our future, even if the general public is headed in another direction.

Here are a few ideas to give you a fighting chance:

1. Do not live near a cell tower or mini station.
2. Purchase an EMF shield, and continue to measure the levels of radiation within 100 feet of your home.
3. Eat healthily and take immune-boosting supplements.
4. Spend lots of time in the forest.
5. Refrain from using your cell phone for long periods, including never keeping your cell phone in your bedroom.
6. When traveling with your cell phone, store it in an EMF protective bag.
7. Consider purchasing some Orgonite, which reportedly scatters electromagnetic fields and turns them into beneficial ones. [Dr. Wilhelm Reich developed this unique composite.](#)
8. Continually educate yourself about the wireless industry and the global government support of this insane endeavor.
9. Remain strong, stay out of fear and continue to improve your vibration through positive thinking, forgiveness, and increased attention toward your mental, emotional and physical health.

*Correction 6/24/19: A previous version of this article made it seem as though “Resolution 1815 of the Council of Europe” recommended the moratorium on 5G, when it was actually the consortium of 180 scientists and doctors mentioned in the opening paragraph.

Mind. Blown? Elevate your inbox with weekly articles from Gaia

Gaia

There's More To You Than You Think

Travel down a new road with Gaia, a member-supported conscious media company. Join our community of seekers, dreamers, and doers to empower your own evolution. Discover over 8,000+ ad-free, streaming videos to inspire and encourage curiosity. Everything is waiting for you; which path will you choose?

Why Does A Conscious Company Charge?

Provide an **ad-free** experience, no exceptions!

Pay the bills without selling your **personal** information.

Produce, edit, and share **thought-provoking** original shows and videos.

Bring scholars, scientists, and even shamans into the **studios**.

Make Gaia **accessible** on your favorite devices.

Keep our **community** active and support its growth.

- \$11.99/month after Trial
- Stream 8,000+ Films & Original Shows
- Ad-Free Streaming All Year

- Stream 8,000+ Films & Original Shows
- Ad-Free Streaming All Year
- Save 31% Over Monthly

- Livestream All Gaia Events
- Watch Live in English and Spanish
- Ad-Free Streaming All Year
- Unlimited Recorded Event Streaming
